

Page Types

Informational Pages

Used to add information to your site, they are the most common type of page.

Your home page is an example of an Informational Page.

You can add text, images, links to new pages, and upload files such as music and presentation files.

All Informational pages have an Outside Link Control for displaying links to other websites.

Calendar Pages

The Calendar Control allows you to add Event Information, and link it to dates displayed on the calendar.

Clicking dates on the Calendar will display events set for that date.

You can keep using the same Event Information year-after-year simply by changing the Event Date.

Online Grades Page

The Grades page is used for viewing student grades from the inetGrades application.

Visitors can log in using the students last name, and password provided by the grading application.

If you do not use the grading application, you will not need this page.

Gallery Pages

InetTeacher no longer uses Gallery pages.

You can now easily create pages of student work, or photos simply by adding tables to Informational pages. You can insert tables onto your page, then fill the cells with images.
